

File 2: Sub-Phase 2.2 — Data Flow Diagram (DFD)

PHASE 2: REQUIREMENT ANALYSIS

Sub-Phase 2.2: Data Flow & Logic Architecture

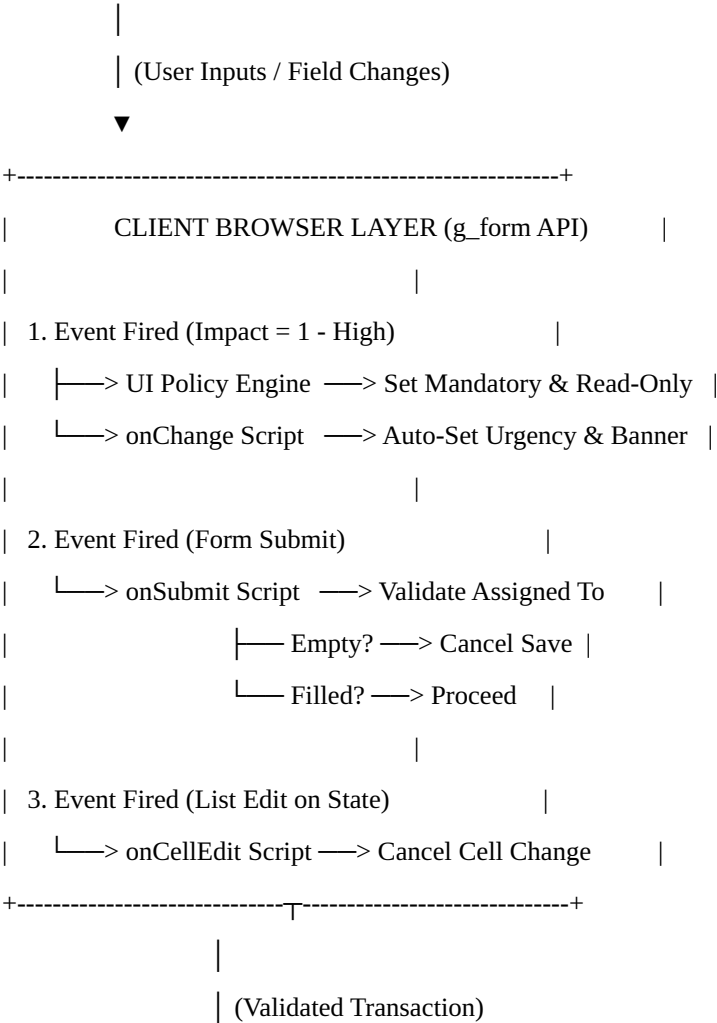

Field	Details
Date	28-09-2026
Team ID	SWTID-2026-8733
Project Name	Implement Client Script & UI Policy (Incident)
Document Type	Sub-Phase Deliverable 2.2 — Data Flow Diagram

1. Data Flow Concept

The Data Flow Diagram (DFD) defines how user inputs propagate through ServiceNow client-side execution engines (UI Policy Engine and Client Script Engine) before updating the underlying incident table database.

2. Client-Side Data Flow Architecture

[Service Desk Agent Interface]

[ServiceNow Database: Incident Table]

3. Data Input, Process, and Output Mapping

Process ID	Data Input	Processing Layer	Logic Applied	Output / System Action
P-01	Impact set to 1	UI Policy Engine	Evaluates Impact is 1 - High.	Sets Assignment group mandatory and Urgency read-only.
P-02	Impact set to 1	onChange Client Script	Calls g_form.setValue('urgency', '1').	Auto-sets Urgency to High and displays info message.
P-03	Submit Button Click	onSubmit Client Script	Evaluates Impact == '1' and Assigned to == ''.	Blocks submit with g_form.showErrorBox() or permits save.
P-04	List View Cell Edit	onCellEdit Client Script	Intercepts edit on State column.	Displays alert dialog and invokes callback(false).
