

File 3: Sub-Phase 2.3 — Solution Requirements

PHASE 2: REQUIREMENT ANALYSIS

Sub-Phase 2.3: Solution Requirements Specification

Field	Details
Date	28-09-2026
Team ID	SWTID-2026-8733
Project Name	Implement Client Script & UI Policy (Incident)
Document Type	Sub-Phase Deliverable 2.3 — Requirements Specification

1. Requirements Overview

This document outlines the detailed Functional Requirements (FR) and Non-Functional Requirements (NFR) governing the deployment of client-side logic on the incident table.

2. Functional Requirements (FR)

Requirement ID	Module / Tool	Condition / Trigger	Expected Behavior / Target Action
FR-01	UI Policy	Impact changes to 1 - High	Dynamically set Assignment group field to Mandatory .
FR-02	UI Policy	Impact changes to 1 - High	Dynamically set Urgency field to Read-Only .
FR-03	onChange Client Script	Field impact changed to 1	Auto-populate Urgency to 1 - High and display blue info banner message.
FR-04	onSubmit Client Script	Form submission triggered	Check if Impact == 1 and Assigned to is empty. If true, display error box and cancel save.
FR-05	onCellEdit Client Script	Inline edit attempt on State column	Alert user and cancel list-view cell modification using callback(false).

3. Non-Functional Requirements (NFR)

Category	Requirement ID	Specification Details	Validation Standard
Performance	NFR-01	Client scripts must execute instantly within browser memory without using synchronous server calls (GlideRecord).	Execution time < 100ms on form load and field change.
Usability	NFR-02	Error and information messages must provide clear, action-oriented feedback to users.	User tests confirm 100% clarity on required fields.
Maintainability	NFR-03	Use native declarative UI Policies where applicable, minimizing custom code for basic field states.	Complies with ServiceNow zero-customization best practices.
Compatibility	NFR-04	Client scripts must function across all standard browser environments (Chrome, Edge, Firefox, Safari).	Cross-browser pass rate of 100%.
