PHASE 2: REQUIREMENT ANALYSIS

Sub-Phase 2.1: Customer Journey Mapping

Field	Details
Date	28-09-2026
Team ID	SWTID-2026-8733
Project Name	Implement Client Script & UI Policy (Incident)
Document Type	Sub-Phase Deliverable 2.1 — Customer Journey

1. Journey Overview

The Customer Journey maps the step-by-step experience of a **Service Desk Agent** interacting with the ServiceNow incident form. It highlights user actions, platform reactions, client-side triggers, and touchpoints across the incident lifecycle.

2. End-to-End User Journey Table

Stage	User Action	System / Client Trigger	Platform Reaction & UI Response	User Experience Impact
1. Form Access	Agent opens an existing incident or creates a new record.	Form onLoad Event	Form renders with default fields; normal field states applied.	Clean baseline interface without clutter.
2. Impact Selection	Agent updates Impact field to 1 - High.	onChange Client Script & UI Policy Trigger	• Urgency automatically populates to 1 - High. • Info banner displays: <i>"Urgency auto-set to High"</i>. • Assignment group becomes Mandatory. • Urgency becomes Read-Only.	Immediate real-time feedback with zero manual effort.
3. Form Submission	Agent clicks Submit while Assigned to field is empty.	onSubmit Client Script	Submission is intercepted and canceled. Field error box appears on Assigned to.	Prevents incomplete data from reaching the server.

Stage	User Action	System / Client Trigger	Platform Reaction & UI Response	User Experience Impact
4. Corrective Action	Agent selects an Assigned to user and clicks Submit .	onSubmit Client Script	Validation passes (return true); form saves successfully to database.	Guarantees high-impact ticket ownership.
5. List View Edit	User double-clicks State field on Incident List view.	onCellEdit Client Script	Edit attempt is blocked with alert modal dialog. Changes revert.	Enforces workflow integrity across list interfaces.
