

File 2: Sub-Phase 3.2 — Proposed Solution Specifications

PHASE 3: DESIGN & SOLUTION ARCHITECTURE

Sub-Phase 3.2: Proposed Solution Specifications

Field	Details
Date	28-09-2026
Team ID	SWTID-2026-8733
Project Name	Implement Client Script & UI Policy (Incident)
Document Type	Sub-Phase Deliverable 3.2 — Solution Specifications

1. Solution Specification Overview

This document details the configuration parameters, conditions, and execution code logic for all components built on the incident table.

2. Component 1: UI Policy Specifications

Parameter	Configuration Value
Policy Name	Enforce Mandatory & Read-Only on High Impact
Table	Incident (incident)
Conditions	Impact is 1 - High
Global / On Load / Reverse	Global = True On load = True Reverse if false = True
UI Policy Action 1	Field: assignment_group Mandatory: True Read-only: Leave alone
UI Policy Action 2	Field: urgency Mandatory: Leave alone Read-only: True

3. Component 2: Client Scripts Technical Specifications

Script Type	Target Field	Execution Trigger	Logic Description & Pseudocode
onChange Script	impact	Fires when Impact field value changes.	Logic: Check if newValue == '1'. If true, execute g_form.setValue('urgency', '1') and g_form.addInfoMessage('Urgency auto-set to High due to High Impact choice.').
onSubmit Script	Form Submit	Fires when user clicks Submit or Update .	Logic: Read g_form.getValue('impact') and g_form.getValue('assigned_to'). If impact == '1' and assigned_to == "", call g_form.showErrorMessage('assigned_to', 'Assigned To is required for High Impact incidents') and return false.
onCellEdit Script	state	Fires when user double-clicks State cell in List View.	Logic: Intercept edit attempt on state. Display alert('State field cannot be edited from list view. Open form to update.') and call callback(false).
